

- Press ctrl+R (run window) and type the following url [\\192.168.51.73\Software](http://192.168.51.73/Software)
- Download the Kaspersky version as per your operating system (Win 8, Win 7).
- You first need to remove existing antivirus software from your system. For e.g. **Norton Antivirus, Macfee, etc**
- Go to the folder '*Remove tool*' and select the appropriate 'uninstall file' based on the anti-virus software in your system
- If you can't find the appropriate one here, go to control panel -> uninstall program -> uninstall your previous anti-virus software
- If still you can't uninstall, search in the internet and try to uninstall all your previously installed anti-virus software
- Once it is uninstalled, click on the 'setup.exe' file in the Kaspersky folder.
- Follow the instruction in the installation wizard.
- If there are any issues, try to set global proxy (refer <http://stdwww.iimahd.ernet.in/ccf/faq.php>) and then try again.
